

Creating Custom Slideshows With Your Own Images

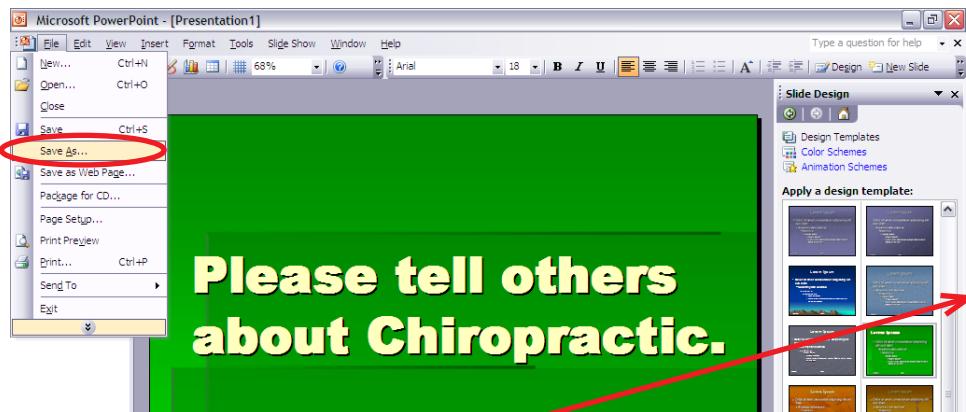

Add a personal touch to your Visual Odyssey slideshows by adding your own images. We have three folders for you to store your special images. They are called “my jpgs,” “power point slides,” and “special jpgs.” My jpgs and special jpgs folders can hold up to 100 images each. Power point slides folder can hold 200 images. In order for the Tours module to recognize your files sequentially, name them “jpg1, jpg2, etc.” Listed below are the image resolution sizes. Have fun exploring the limitless potential of incorporating your own images!

my jpgs	jpg1 - jpg100	800x600
power point slides	jpg1 - jpg200	960x720
special jpgs	jpg1 - jpg100	960x720

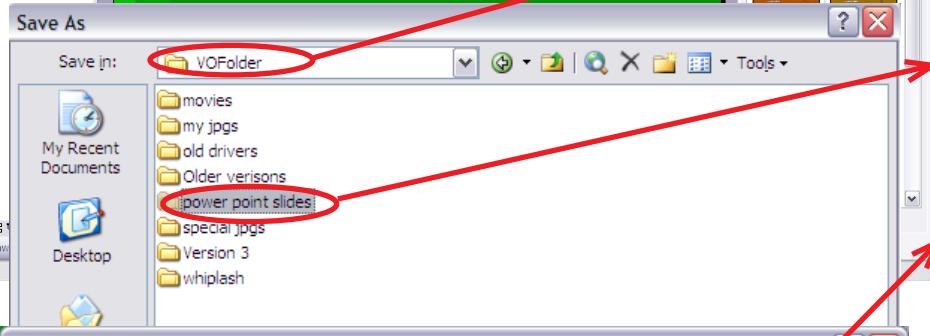

Read on to learn how to do this yourself.

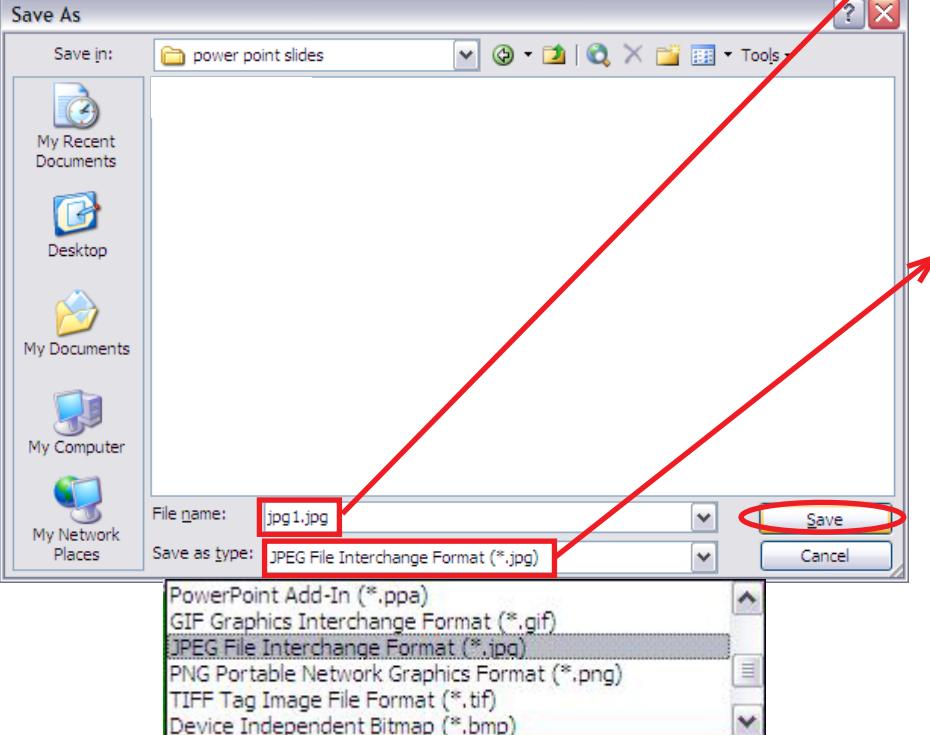

Import Slides

Step 1: Select the “File” tab and then click “Save as.”

Step 2: In the “Save in” window click the drop down menu and click on the “VO Folder.”

Step 3: Select the “power point slides” folder.

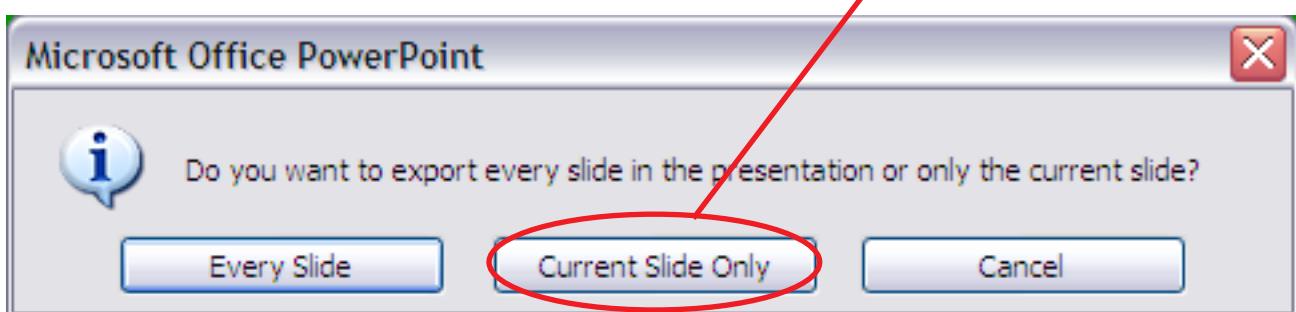

Step 4: In “File Name” name the image jpg1 (jpg1 - jpg200).

The naming is critical and must follow this format to show in the slide tray

Step 5: Change the “Save as type” to “JPEG File Interchange Format.” When you select JPEG File Interchange, it will automatically add .jpg to the file name.

Step 6: Click “Save.”

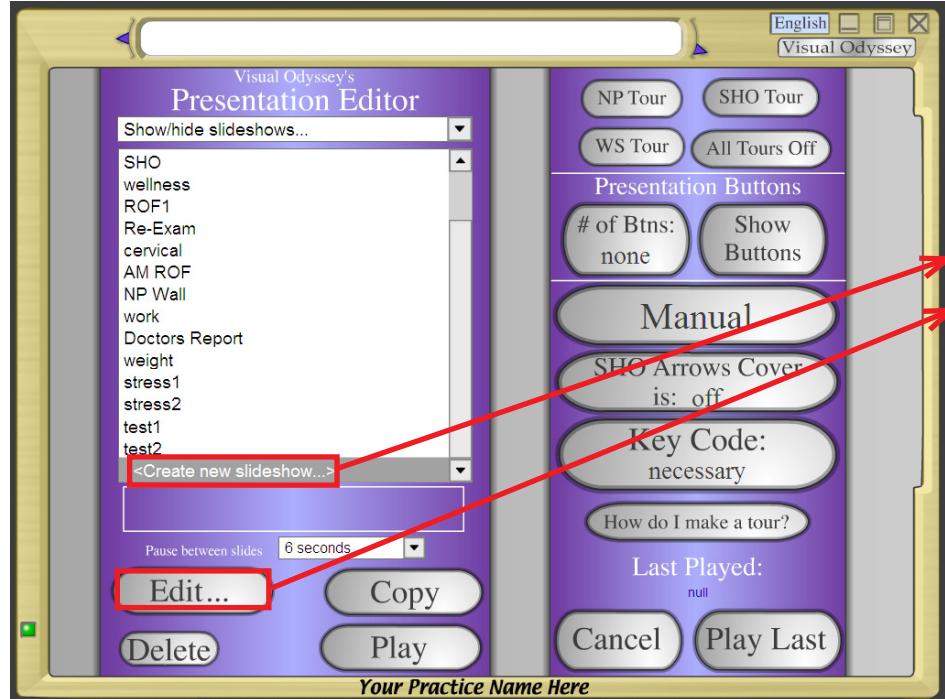

Step 7: Click “Current Slide Only.”

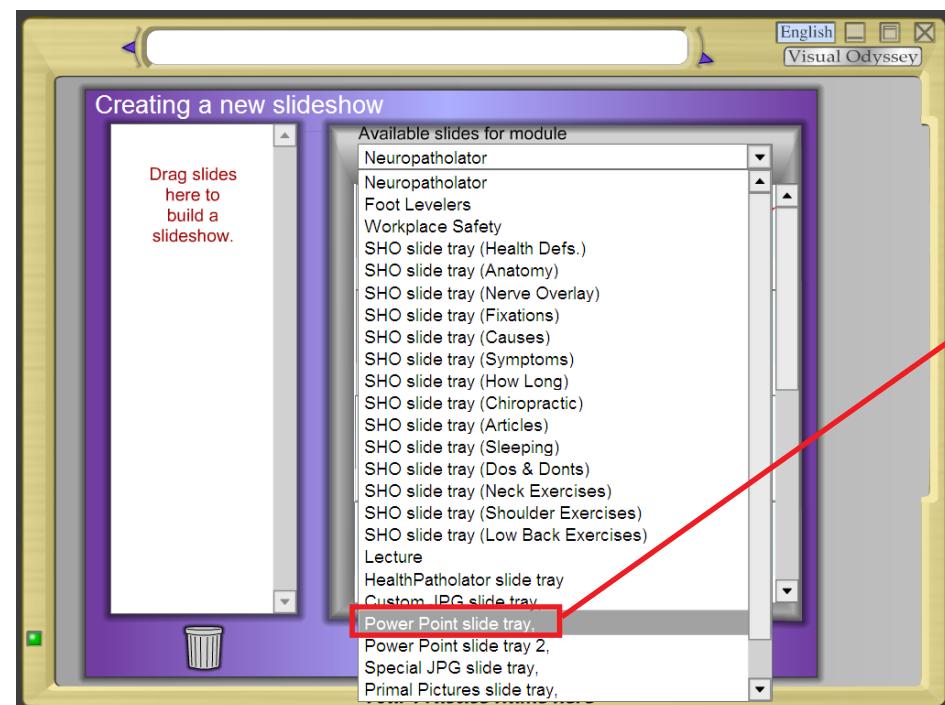

Import Slides

Step 8: Open the Neuropatholator Software and click on “Tours.”

Step 9: Create a new slideshow or edit one that has already been made.

Step 10: Click on the dropdown menu and select “Power Point slide tray.” Here you will find the power point slide that you have already created and saved.

Step 11: Select the image you have just made, and drag it over to the film strip to create your own or edit a presentation.
